

LIGHTNING ELIMINATORS

WWW.LECGLOBAL.COM

GROUNDING PRODUCTS & SERVICES

Proper grounding is critical to personnel safety and uninterrupted operations, and serves as the foundation for a complete lightning protection system. For over 40 years we've helped companies around the world increase their safety and reliability using a combination of advanced testing services and superior grounding products designed with lightning in mind.

1. RGA™ for Floating Roof Tanks

Floating roof tanks are always at risk from fires caused by lightning strikes. The award winning Retractable Grounding Assembly reduces this risk by creating a low-impedance bond between the roof and shell. The RGA is cost effective, easy to install, and virtually maintenance free.

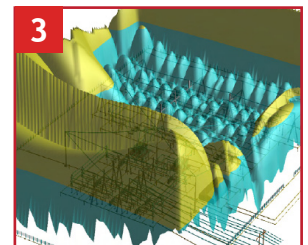

2. Chem-Rod™ Grounding Electrode

The patented Chem-Rod creates the optimal earth connection with a large conductive surface, electrolytic salts, and specially formulated backfill. Available in a variety of configurations, Chem-Rods help achieve your target resistance using fewer electrodes and less real estate.

3. Smart Ground™ Testing Service

Smart Ground is an advanced ground audit system that produces highly accurate results, even on energized systems. Includes computer modeling, a complete professional analysis to IEEE/IEC standards, and practical recommendations to improve your grounding system.

4. Traditional Testing & More

In addition to our specialized products and services, we offer standard ground testing services, as well as, a full line of ground resistance meters and grounding components available for purchase.

Achieving Complete Protection

We are a full-service firm aligned to solve your most complex challenges in lightning protection, grounding, and surge suppression. Our integrated approach weighs all of the factors affecting your exposure and ensures a solution tailored to your needs and acceptable level of risk.
